

Clarifying
the Benefits to
Living Beings

Evaluation of functional health materials

Benefits

The effectiveness of functional health materials can be evaluated through the construction of purpose-built experimental systems.

Manufacture of materials and blends that speed up recovery from muscle fatigue

Manufacture of materials and blends that improve sleep quality

Manufacture of materials and blends that increase the efficiency of metabolism

Manufacture of materials and blends that improve cognitive and mental status

Our Technology

Construction of purpose-built evaluation systems

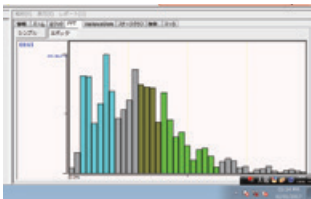

Ex.)

Motor performance measurement

Brain function measurement

Measurement of carbohydrate/fat metabolism

Measurement of protein metabolism

Effectiveness confirmed using evaluation systems

High functionality through blend adjustment and optimization of components

Provision of functional health materials
