

Processing Powders to Control Their Properties

Enteric products for animal feeds

Benefits

By protecting active ingredients appropriately, enteric products including hydrophilic ingredients can be made at low cost and active ingredients can be delivered to target regions in the digestive tracts.

Ingredients which dissolve easily in the stomach can be delivered to the absorption sites

Enteric products keeping storage stability can be designed

Ingredients that work in the lower digestive tract can be delivered to their site of action

Market expansion is expected, due to the reduced cost
